

GoTo Networks Announces Greg Varisco will Join the Board of Directors of Australia West Express

GoTo Networks, Inc., developers of the Australia West Express submarine cable system, is pleased to announce that Greg Varisco will join the Board of Directors of Australia West Express, Inc. Australia West Express is a new undersea telecommunications cable system from Perth, Australia to Djibouti City, Djibouti.

Mr. Varisco is well regarded in the industry and brings a wealth of highly relevant experience. In 2010, he co-founded Emerald Networks, which later became Aqua Comms, a \$300M advanced fiber optic transatlantic network, where he served as COO and CEO. Prior to that, Mr. Varisco held senior positions at several telecommunications companies. He was one of the founders of Harris Caprock's predecessor company which provides a range of telecommunications services to the shipping and Oil & Gas industries.

John Mariano, Chairman and CEO of Australia West Express, welcomed Mr. Varisco. "Greg has the industry experience and stature which will significantly benefit the progress of AWE. "

Australia West Express is designed to serve the growing traffic demands of Australia to Europe with low latency and a safe deep-water route, lowering risk. A terminus landing in Djibouti provides the Australia West Express clients with competitive options for forwarding traffic to Europe, as well as Eastern Africa, the Middle East, and the Eastern Mediterranean, and the direct route from Perth to Djibouti ensures the lowest latency between Australia and Europe and other points west. Expected Ready for Service date for Australia West Express is the 4th Quarter 2018. Australia West Express will provide a secure, direct route across the Indian Ocean almost exclusively through deep, international waters and as it comes to shore, will be deployed in protected waterways. At the landing in Djibouti, convenient interconnection can be made to existing EIG, SEACOM, EASSy, SEA-ME-WE 3, AAE-1 and SEA-ME-WE-5. The Perth terminus will be in a major data center (to be announced in the near future) with excellent connectivity options.

About GoTo Networks

GoTo Networks was established specifically to implement submarine cable systems in greenfield and underserved markets. Australia West Express is the first system to be undertaken. GoTo is made up of submarine system developers whose experience has accounted for a vast array of completed telecommunication projects. Originating in research, evolving into consulting, its members have been

involved with strategic planning, technical solution development, project implementation management, commercialization and sales of international network projects similar to AWE. The strength of GoTo comes from its diverse and experienced member profile that includes senior management, technical, financial, project management, systems engineering and sales, representing all the core elements required for successfully implementing AWE.
